Target: Data Analyst - Delhi NCR

1. ATS-Friendly Cover Letter

Subject: Application for Data Analyst - Lakshay Sharma

Dear Hiring Manager,

I am writing to express my interest in the Data Analyst role at [Company Name]. As a B.Tech CSE (Data Science) student at KCC Institute of Technology and Management with hands-on experience building end-to-end analytics solutions on Databricks, Power BI, and SQL, I am prepared to contribute to your data and BI initiatives from day one.

My project experience spans four domains - energy, HR, healthcare, and pricing - where I designed complete data pipelines, built governed data frameworks, and delivered dashboards that drove decision-making. At the core of my work is a focus on data quality, metric logic, and business alignment.

On my Smart Energy Consumption Analytics Platform, I designed a full medallion architecture (Bronze/Silver/Gold Delta layers) on Databricks, implementing Auto Loader ingestion and Workflows orchestration. I built a Power BI dashboard connected to Databricks SQL Warehouse with DAX measures tracking consumption trends and operational efficiency. I also implemented reconciliation logic between pipeline layers, ensuring every KPI was traceable to source data.

For a Pricing Strategy Analysis, I developed 30+ DAX measures across four analytical phases - synthetic data generation, exploratory analysis, a recommendation engine, and a BI dashboard - translating complex pricing logic into structured, documented KPIs. My HR Analytics Dashboard included 18 DAX measures organized into display folders and a FastAPI-based attrition risk scoring API that brought predictive model outputs into the reporting layer.

I combine strong technical skills - SQL, Python (Pandas, NumPy), Power BI, Databricks, PySpark, Delta Lake - with a governance-minded approach: I document data lineage, implement quality checks, and design for reproducibility. My certifications from Databricks (Generative AI Fundamentals), Anthropic (Claude API), and Forage simulations at J.P. Morgan and Deloitte Australia reinforce this foundation.

I am looking for a Data Analyst role in the Delhi NCR region where I can apply my experience in BI development, data modeling, and KPI design to help your team make data-driven decisions with confidence. I would welcome the opportunity to discuss how my background aligns with [Company Name]'s analytics needs.

Best regards,

Lakshay Sharma

2. Recruiter Outreach Email

Subject: Data Analyst Candidate - Lakshay Sharma | Databricks . Power BI . SQL

Hi [Recruiter Name],

I'm a Data Science student at KCC Institute of Technology and Management actively seeking a Data Analyst role in Delhi NCR.

Over the past year, I've built end-to-end analytics solutions across four domains:

- **Energy** - Medallion architecture on Databricks (Bronze/Silver/Gold) with Power BI dashboards connected to SQL Warehouse
- **Pricing** - 30+ DAX measures, EDA, and a recommendation engine with documented KPI logic
- **HR** - 18 DAX measures, attrition risk scoring via FastAPI, custom Power BI theme
- **Healthcare** - SQL-based data cleaning pipelines, patient trend dashboards on Databricks

My toolkit: SQL, Power BI, Databricks, PySpark, Delta Lake, Python (Pandas/NumPy), DAX, Power Query.

I've also completed certifications from Databricks (Gen AI Fundamentals), Anthropic (Claude API), and Forage simulations with J.P. Morgan and Deloitte Australia.

Would you be open to a brief conversation about how my background fits current Data Analyst openings at [Company Name]?

Best,

Lakshay Sharma

3. Hiring Manager Email

Subject: Data Analyst Candidate - Pipeline Design, BI Dashboards, KPI Governance

Dear [Hiring Manager Name],

I'm writing to apply for the Data Analyst role at [Company Name]. I am a B.Tech CSE (Data Science) student at KCC Institute of Technology and Management with project experience building governed data pipelines and business-facing dashboards using Databricks, Power BI, and SQL.

What sets me apart is my focus on data quality and metric governance - I don't just build dashboards; I design the data frameworks that make them trustworthy.

Smart Energy Consumption Analytics Platform

- Designed Bronze/Silver/Gold medallion architecture on Databricks with Auto Loader and Workflows
- Built Power BI dashboards with DAX measures tracking consumption trends and efficiency KPIs
- Implemented data quality checks and reconciliation logic between pipeline layers
- Maintained data lineage documentation across all transformations

Pricing Strategy Analysis

- 4-phase analysis: synthetic data generation, EDA, recommendation engine, Power BI dashboard
- 30+ DAX measures with documented metric definitions for each KPI
- Translated business pricing requirements into structured analytical models

HR Analytics Dashboard

- 18 DAX measures in display folders covering attrition, headcount, and workforce KPIs
- FastAPI-based attrition risk scoring API connecting predictive models to BI layer
- Power Query transformations with custom theme for consistent formatting

I bring strong hands-on capability in SQL, Python, Power BI, and Databricks, paired with governance practices - data lineage, quality checks, metric documentation - that most entry-level candidates lack. My certifications from Databricks, Anthropic, and Forage (J.P. Morgan, Deloitte) demonstrate my commitment to the field.

I am available for Data Analyst roles in Delhi NCR and would love to discuss how I can contribute to [Company Name]'s analytics team.

Best regards,

Lakshay Sharma

4. LinkedIn Connection Request

Hi [Name], I'm a Data Science student building analytics pipelines on Databricks + Power BI across energy, healthcare, and pricing domains

5. Referral Request Message

Hi [Name],

Hope you're doing well. I'm reaching out because I'm actively applying for Data Analyst roles in Delhi NCR and came across [Company Name].

My background includes building end-to-end analytics solutions on Databricks and Power BI - medallion architecture pipelines, DAX-measured dashboards, data quality checks, and metric documentation across energy, healthcare, HR, and pricing projects.

I've attached my resume for reference. If you see a fit for any open Data Analyst or BI roles on your team, I'd be grateful for a referral. Happy to chat more about my experience if that's helpful.

Thanks so much,

Lakshay Sharma

6. Follow-Up Email (5 Days After No Response)

Subject: Re: Data Analyst Candidate - Lakshay Sharma

Hi [Name],

I wanted to gently follow up on my application for the Data Analyst role at [Company Name]. I remain very interested in the opportunity to contribute to your analytics team.

Just a quick reminder of what I bring:

- End-to-end pipeline design on Databricks (medallion architecture, Delta Lake, Auto Loader)
- Power BI dashboards with DAX measures, custom themes, and SQL Warehouse integration
- Data quality checks, reconciliation logic, and metric documentation across projects
- Hands-on experience across energy, healthcare, HR, and pricing domains

I'd welcome the chance to discuss how my background could support [Company Name]'s data and BI initiatives. Happy to hop on a call at your convenience.

Best regards,

Lakshay Sharma

7. 30-Second Professional Introduction

I am a Data Science student at KCC Institute of Technology and Management, specializing in building end-to-end analytics solutions on Data

8. Top 10 Job Titles Best Suited for My Profile

1. Data Analyst
2. Business Intelligence Analyst
3. Data Analyst (Power BI / Databricks)
4. Analytics Engineer
5. BI Developer
6. Junior Data Engineer
7. Data Analytics Consultant
8. Reporting Analyst
9. Data Operations Analyst
10. Insights Analyst

9. Key Strengths Recruiters Will Notice

Medallion Architecture Pipeline Design

You've designed Bronze/Silver/Gold Delta Lake pipelines on Databricks with Auto Loader and Workflows - a skill typically expected of mid-level data engineers, not students.

DAX at Scale

30+ DAX measures across the pricing project + 18 in HR + measures in energy and healthcare. You organize them into display folders and document metric logic - that's production-grade BI maturity.

Multi-Domain Project Depth

Energy, healthcare, HR, pricing - you didn't just follow tutorials. You built full solutions across four different business contexts, each with its own data model and KPI structure.

Governance-First Mindset

Data quality checks, reconciliation logic, lineage documentation, metric definitions - you differentiate yourself from typical student projects by treating data as a governed asset.

API-to-BI Integration

Your HR dashboard connects a FastAPI attrition risk scoring API into Power BI - showing you understand how analytical models feed into reporting layers, not just how to build charts.

Certified Foundation

Databricks Generative AI, Anthropic Claude API, Forage simulations at J.P. Morgan and Deloitte - these validate that you invest in learning from industry-leading organizations.

Technical Breadth + Focus

SQL, Python, PySpark, Delta Lake, Power BI, Tableau, DAX, Power Query, Git, Databricks Workflows - wide coverage without being scattered. Every tool maps to a specific pipeline stage.

10. Skill Gap Analysis

Current Strengths

Category	Skills	Proficiency
Query & Databases	SQL, DAX, Power Query	Strong
BI & Visualization	Power BI, Tableau, Advanced Excel	Strong
Big Data & Cloud	Databricks, PySpark, Delta Lake	Intermediate
Programming	Python (Pandas, NumPy, Matplotlib)	Intermediate
Data Framework	Data modeling, medallion architecture, EDA, lineage	Strong
Governance	Data quality checks, KPI design, reconciliation, documentation	Strong
AI / Gen AI	Claude API, Generative AI Fundamentals	Foundational

Missing Skills & Learning Roadmap

Skill	Importance	How to Address
Cloud Platform Certs (AWS/Azure/GCP)	Medium-High	Azure DP-900 or AWS Cloud Practitioner (2-4 wks)
Statistical Analysis / A/B Testing	Medium	Google Advanced Data Analytics on Coursera (3-4 wks)
Airflow / Orchestration Tools	Medium	Astronomer Airflow Fundamentals (1-2 wks)
dbt (data build tool)	Medium	dbt Fundamentals - free course (1 wk)
Stakeholder Communication	Medium	Practice SCQA framework for presenting insights
Advanced Git / CI/CD	Low-Medium	GitHub Actions for CI/CD (1 wk)

Recommended Learning Roadmap

Month 1 - Fill Immediate Gaps

- Week 1-2: dbt Fundamentals (free, dbt.dev) - add 'dbt' to your resume
- Week 3-4: Google Advanced Data Analytics on Coursera (A/B testing, regression)

Month 2 - Cloud Certification

- Week 1-3: Azure Data Fundamentals (DP-900) - Microsoft Learn, free
- Week 4: Practice tests + exam

Month 3 - Orchestration & Advanced Pipelines

- Week 1-2: Airflow Fundamentals (Astronomer)
- Week 3-4: Build one new project combining dbt + Airflow + Databricks

Ongoing

- Practice one mock stakeholder presentation per month using SCQA framework
- Contribute to one open-source data project on GitHub

11. Personal Brand Summary

Unique Value Proposition

I build governed, end-to-end analytics pipelines on Databricks and Power BI - from medallion architecture data ingestion to KPI-measured d

Professional Positioning Statement

A Data Science student who thinks like a BI Engineer - designing medallion-architecture data frameworks, writing production-grade DAX at

Recruiter Headline

(Use this as your LinkedIn headline)

12. Interview Talking Points

Most Impressive Achievements

Smart Energy Consumption Analytics Platform

Lead with this. Full medallion architecture (Bronze/Silver/Gold), Auto Loader, Workflows, Databricks SQL Warehouse, Power BI with DAX, data quality checks, reconciliation logic, lineage docs. Covers the entire analytics lifecycle.

Pricing Strategy Analysis (30+ DAX Measures)

30+ measures across 4 phases: synthetic data, EDA, recommendations, dashboard. Each measure had documented metric definitions - shows you can handle enterprise BI complexity.

HR Analytics Dashboard with Risk Scoring API

Unique: FastAPI API feeding Power BI. Bridges data science (modeling) and BI (reporting).

Clinisight Healthcare Dashboard on Databricks

End-to-end project with data cleaning and transformation pipelines in a different domain.

Key Stories to Prepare

Story	When to Use
'I designed a medallion architecture pipeline... for governed, traceable data from raw ingestion to	General project or architecture questions
'I created 30+ DAX measures... each documented with business logic so stakeholders understood	Stakeholder communication, documentation, BI design
'I built an API that takes attrition risk scores and feeds directly into Power BI... real-time risk witho	Innovation, cross-functional work, system integration
'I implemented reconciliation checks between Bronze and Silver layers to catch quality issues bef	Data quality, attention to detail, governance

Areas Recruiters Are Likely to Ask About

Medallion Architecture

Explain Bronze/Silver/Gold: Bronze is raw ingestion (append-only), Silver is cleaned/validated (dedup, quality checks), Gold is business-level aggregates ready for BI. Ensures data is traceable, reprocessable, and consumption-ready.

DAX Measures Design

Pick one from the pricing or HR dashboard. Demonstrate understanding of filter context, CALCULATE, time intelligence. Example: month-over-month attrition rate with proper context transition.

Data Quality Approaches

Reconciliation logic between pipeline layers, data quality checks at Silver ingestion, lineage documentation so every KPI can be traced back to source. Accuracy as a pipeline feature, not an afterthought.

Stakeholder Communication

Reference the pricing project: business requirements became structured analytical models with documented KPI definitions. Process: understand question -> define metric -> design data model -> build measure -> validate -> present.

Tooling Choices

Databricks for medallion architecture and Delta Lake capabilities (data quality, reprocessing). Power BI for DAX flexibility, cost-effectiveness, and Databricks SQL Warehouse integration. Demonstrate intentional, not accidental, choices.
