Lakshay Sharma

Data Analyst – BI & Data Framework

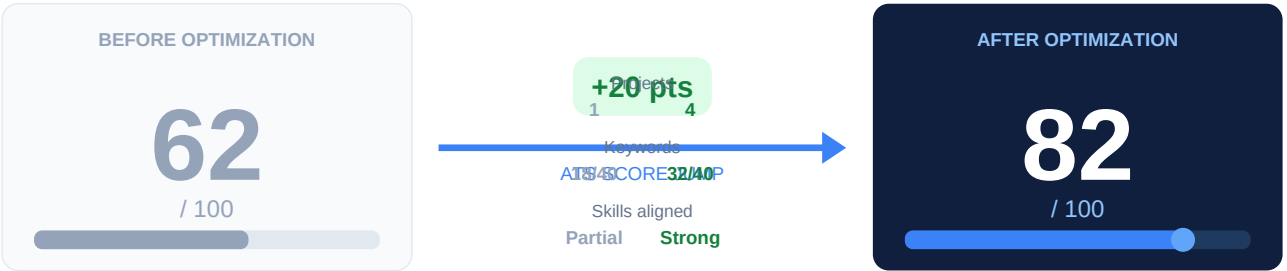

Optimized

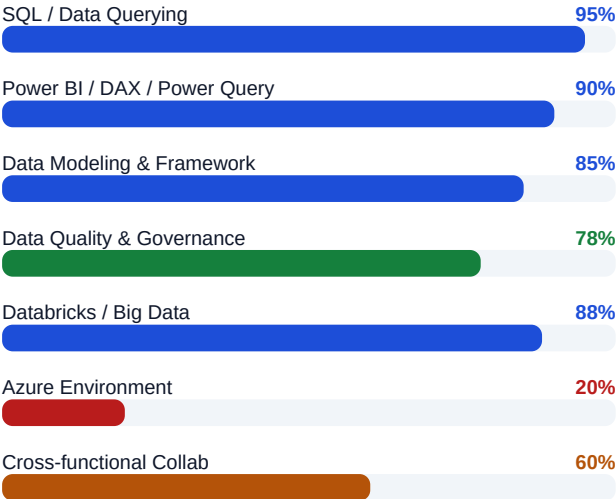

82 / 100

ATS Score

SCORE TRANSFORMATION

KEYWORD MATCH BY CATEGORY

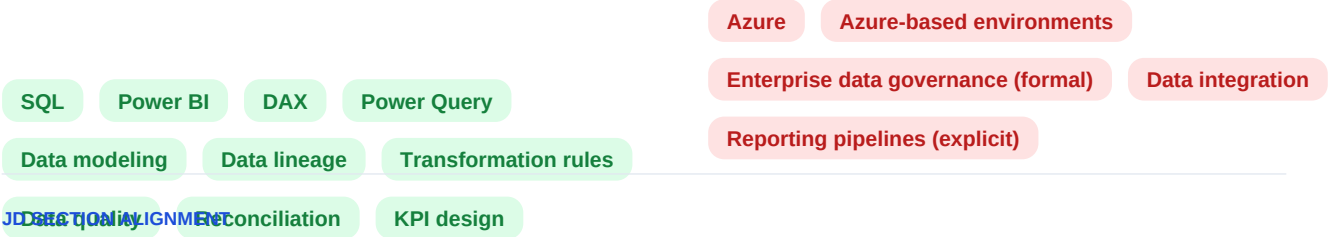

QUICK WINS

- ✓ Medallion architecture maps directly to 'enterprise data frameworks'
- ✓ 18 DAX measures + Power Query in HR project covers BI section exactly
- ! Add 'Azure Databricks' if your Databricks work ran on Azure — biggest keyword gap
- ! Mention cross-functional work explicitly in project bullets

JD KEYWORD MAPPING

✓ Found in optimized resume

x Missing / Partial

JD Requirement	Coverage in Resume	Status
Data framework & data models	Smart Energy medallion architecture; HR data model bullets	Strong

Metric logic & data definitions	18 DAX measures + documented metric definitions in Pricing project	Strong
Data quality & reconciliation	Reconciliation logic bullet in Smart Energy; data cleaning in Clinisight	Good
Power BI datasets, reports, DAX	4 projects with Power BI; 30+ DAX measures; Power Query transformations	Strong
SQL & Azure-based environments	SQL covered well; Azure missing — Databricks listed but Azure not named	Partial
Data documentation & lineage	Data lineage documentation bullet in Smart Energy project	Good
Cross-functional collaboration	Implied through multi-domain projects; not stated explicitly	Partial

RECOMMENDATIONS TO PUSH SCORE TO 90+

- Add 'Azure Databricks' explicitly**
 If your Databricks work ran on Azure (likely — Databricks is cloud-hosted), add 'Azure Databricks' to your skills and at least one project bullet. This is the single biggest ATS gap.
- Add a cross-functional bullet**
 The JD emphasizes partnering with Finance, Ops, and Tech. Add one line per project mentioning who the stakeholders were: 'Built for [team]' or 'Presented findings to [audience]'.
- Add 'data lineage' to your skills section**
 You have it in project bullets, but ATS scanners also check the Skills section. Add it under Data Framework skills to double-count the keyword.
- Consider a 'Tools & Platforms' skills row**
 Listing 'Databricks Workflows, Auto Loader' is good. Adding 'Databricks Unity Catalog' (if you've used it) would strengthen data governance coverage further.
